

QHSE Specialist

In2Care, part of **Envu**, (www.envu.com), develops innovative solutions for targeted mosquito control. Its In2Care Mosquito Station targets both adult mosquitoes and larvae and is used worldwide. The stations require a monthly refill containing the active components. These refill sets are produced at In2Care's new facility in Wageningen, which was established to meet growing international demand. The production site is still developing; processes are being established, and there is room to improve quality and safety. The culture is informal, open and entrepreneurial, with short lines of communication between the office and production. In this young, dynamic environment, a pragmatic approach is important: building robust procedures while keeping day-to-day operations in mind. As QHSE Specialist, you'll have plenty of scope to build and improve. You work closely with production, identify risks and opportunities, and turn them into practical solutions. You'll help further professionalize Quality & Safety and engage employees in safe, quality-conscious ways of working. At the same time, you are not doing this alone: you can draw on the knowledge, expertise and support available within the wider Envu organization.

Owner and ambassador of Quality and Safety

Function

- Responsible for identifying, assessing and controlling QHSE risks within the production environment and translating them into concrete improvement measures
- Developing, implementing and embedding Quality & Safety processes and procedures at the growing production site
- Maintaining and improving the Quality Management System in line with relevant ISO standards and legislation
- Investigating and following up incidents, non-conformances and complaints, including root-cause analyses and CAPA
- Training, advising and engaging employees to strengthen safety awareness and quality-conscious ways of working
- Developing and updating SOPs, work instructions and risk assessments and ensuring their practical implementation
- Coordinating and following up internal and external audits, KPIs and improvement actions with internal and external partners
- Reporting to the Global Director of Quality & HSE of Envu, based in France.

Profile

- Bachelor's degree or equivalent level of professional and intellectual ability, preferably in Quality Management, Food Technology, Occupational Health & Safety, Environmental Science or a related field
- Several years of QHSE experience, having learned the profession under experienced guidance and now ready to take on responsibility independently
- Knowledge of Dutch health, safety and environmental legislation
- Experience with risk assessments, audits, CAPA and improving procedures and work instructions
- Practical and self-driven in identifying risks, setting priorities and implementing improvements
- Strong communication and training skills, with the ability to engage employees in Quality & Safety
- Good command of English and preferably living within reasonable commuting distance of Wageningen
- Personal characteristics: ownership, proactive, curious, pragmatic, persuasive, entrepreneurial, analytical and continuously focused on improvement.
