1133XLP1500

Pressure restricted grease gun 1500 psi

Specification:

Pressure restricted at 1500 psi

Output rate: 0,86 gr/stroke

Outlet size: 1/8 NPT

Hose: 18"

For 400 gr cartridges or bulk filling

Before first use the pressure valve needs to be vented to release all air from the system. If not properly vented frequent air entrapment in the grease gun can be expected.

Venting procedure:

To vent the grease gun put grease cartridge in the grease gun. Block the grease gun outlet with the supplied 1/8 plug. Release the return line at the grease gun head and start pumping the grease gun until grease releases from the return line.

Refit the pressure return line to the cartridge
